EDUCATION

- **Thapar Institute of Engineering & Technology** Punjab, India
Bachelor of Engineering in Electronics & Instrumentation; GPA: 2.8 (6.93/10.0) *Aug. 2015 – July 2019*
- **Kundan Vidya Mandir** Punjab, India
Intermediate (CBSE); GPA: 3.6 (90%) *Oct 2013 – Sep 2015*
Matriculation (CBSE); GPA: 4 (10.0/10.0) *Oct 2011 – Sep 2013*

EXPERIENCE

- **Oracle Financial Services Software** (Remote) Bengaluru, Karnataka
Software Engineer (IC-2) *March 2022 – Present*
 - **Frontend:** Bootstrapped the UI for fraud detection app & later restructured the codebase to make it common for both card & wire fraud detection (earlier it was 2 separate codebases)
 - **Backend:** Restructured & refactored card fraud detection app to make use of inhouse JMS framework/ PMF framework & wrote multi-threaded migration utility for tables changes which were incompatible with older version, added archiving, integrated with other application & wrote a API layer for other application to integrate with our app & helped make it more abstract codebase & added support for wire fraud detection & merged 2 codebases into one & was involved in dockerization efforts & testing of the application
 - **Fullstack:** Wrote an abstraction that allowed consultants to add new UI fields directly from the DB & some config created using templates in html/ javascript to add changes dynamically without requiring changes to the backend
 - **Cloud Migration:** setup initial environment for team to start with on-prem migration framework & quickly understood & proliferated the knowledge to rest of the team & started working on cloud application processes & tools & helped rest of the team ease into the workflow by leveraging already existing documentation & talking to the right people, improved the upload utility tool & application code which resulted in 90% smaller files uploaded to object store by gzipping & faster uploading by using multi-threaded upload & using multi-part upload which resulted in ~20x faster upload-download cycle while migrating, also proposed changes which would result in 95% faster deletion of migrated data in temporary area using DML instead of DDL & parallelizing inserts in DB
 - **Leadership:** Made numerous changes which allowed junior engineers to grasp the code quicker & be more effective at frontend/ backend & database layers, setup multiple stubs which can then parallelly be worked on by junior engineers, gave multiple KT sessions on multiple topics including UI/ backend/ DB/ cloud & other internal processes & tools to fellow engineers
 - **Misc:** Handled most of the documentation for the fraud detection app personally, & provided QA with a lot of guidance on how to setup & test our application & helping them troubleshoot installation/ & helping them understand the features & use cases & what & how to test, also worked on updating OS libraries & software patches to meet security compliance for servers & worked on testing & updating application code for security vulnerabilities & accessibility & and was responsible for most of the cross team work collaboration efforts across all work
- **Yschool** (Freelance) Gurgaon, Delhi
Backend Developer [Flask, Redis, Celery, Postgres, AWS] *June 2020 – March 2022*
 - **Answer Correction:** Async batch process for correcting marks for students if answer is changed
 - **Migration from per Institute to Global:** Made necessary changes in APIs/ migrations in db to facilitate moving business model from per institute to one global source for all students
 - **Misc:** Identified & added new API to help reduce commonly called API with big load, bug fixes, db migrations*Frontend Developer [AngularJS, Backbone, jQuery(\$), underscore(-)]* *June 2020 – March 2022*
 - **Question Paper Print:** Wrote an algorithm that reduced number of pages required while printing tests with latex by ~40% on CMS site, saving millions of pages per year
 - **Misc:** Ported pages(web) from local to global admin site, wrote mini JSON to CSV library for reporting, developed solution to play videos from multiple sources & manage multiple instances & players in one view, bug fixes*Mobile Developer [Flutter, Android, BLoC]* *June 2020 – March 2022*
 - **Video Player:** Added functionalities in video player to change hls video quality, speed for videos hosted on vimeo & made custom UI to match app
 - **New Mobile App:** Developed initial redesigned UI with BLoCs architecture as state management for sign up/login flow

- **Misc:** Stored current test state in local storage & wrote submission loop for bad internet/ random app close/resume test functionality & check jobQueue for unsubmitted tests, setup & added Firebase integration, BigTable for app updates, notifications, analytics, numerous bug fixes, logic updates & researched viability/ cost of new features
- **Wipro Limited** Bengaluru, Karnataka
GSK: Associate Consultant (SAP, LSMW Analyst) *March 2020 – March 2022*
 - **LSMW Analyst:** Part of Data service team, involve in migrating legacy data to SAP using LSMW program, status calls, co-ordinating with FCs, DSP team & helping them understand errors, suggest changes to make data acceptable, doing dry runs & loading data into system & maintaining correspondence with data verifiers & data owners & documenting all steps, defects with ALM, helping leads/ managers keep track of status of objects & overall wave & helped move millions of records
 - **Cross Training & Mentorship:** Took part in cross training with DSP team, where they helped us understand their work, process & we trained them on our work. Have also given training to 5-6 juniors to introduce them to our work & processes we follow, including their onboarding. I regularly took initiative to proactively help the wave leads & FCs to fix issues in timely manner to finish everything can be done within stipulated timelines, acted as adhoc LSMW lead in absence of other seniors
- XOServe Limited: Associate Consultant (SAP Exceptions Analyst, L2 ABAP Developer)* *Dec. 2019 – Feb. 2020*
 - **Exception handling:** Documented exceptions catalogues & was involved in identifying & closing ~150,000 records with exceptions, other tasks included running SQL queries & helped identify a bug which required change in one program, which was affecting a large number of records which couldn't be fixed by SQL manipulations
 - **Development:** Wrote 2 ABAP programs to automate exception resolution
- **DTRL, DRDO** Civil Lines, Delhi
Intern *Oct. 2018 – March 2019*
 - **IoT project for landslide prediction using capacitive soil moisture sensor & MEMS:** Did academic research of landslides, existing solutions for prediction & developed low cost IoT based solution using Arduino Uno, sim900a, soil moisture sensor, MPU-6050 to log data by simulating landslides on small models
- **BEL** Panchkula, Haryana
Intern *June 2017 – July 2017*
 - **TES (Testing Equipment Support):** Made ER diagrams in MS access to normalize database tables used for reporting, worked on automating hardware testing process with LabView

PROJECTS

- **Proglog:** Distributed commit log based on Distributed Services with Go book, it was an introduction to writing distributed systems & personally I learned about Kubernetes & it was an excellent mix of practical low level programming & distributed systems concepts such as membership using SWIM protocols (gossip) & managing distributed state using consensus protocols (RAFT) to write a distributed log
- **CRUD apps:** Have written multiple CRUD apps in multiple languages with different goals like javascript for learning new framework like angular/ react
python tools for monitoring ecommerce prices of items/ learning flask/ django/ SQLAlchemy
golang for learning grpc & microservices architecture
java for learning about spring/springboot/Hibernate/MySQL & making android apps like a pokedex
- **Canvas Based apps:** Wrote 2 apps based on canvas in javascript, one for making recursive fractal H trees & other is conway's game of life as introduction to graphical application & for fun

SKILLS

- **Languages:** Python, Javascript/ Typescript, Dart, SQL, Java, C++, C, Kotlin, ABAP, Go
- **Technologies**
Backends: Flask, Celery, Django, Nodejs, Spring, SpringBoot, WebLogic
Frontends: jQuery, Backbone, Angular, React, Flutter, OJET
DBs: Postgres, MySQL, Oracle DBMS, SQLAlchemy, Hibernate
Cloud: OCI, AWS, GCP
Misc: redis, docker, kubernetes, git, svn, maven, ant, jenkins, SAP, MS Office, L^AT_EX
- **Leadership:** LSMW Lead, Basketball Captain **Achievements:** Citrix Hybrid Cloud Scholarship, Oracle Pacesetter Award
- **Hobbies:** Cooking, Gym, Basketball, Reading, Programming, Guitar, Spotify, YouTube
